

Senior Technical Writer_Assignment

Thank you for taking the time to complete the test for us. Try your best to complete the tests - there is no such thing as perfection.

If during the creation of content/test scripts, you are stuck at some point, state the error where you were stuck and the research you performed to resolve it. It is ok if you are unable to resolve the error and get the script running.

We are interested in learning about your thought process and analytical abilities in this test so don't beat yourself if the test scripts are not perfect.

Wish you all the best!

Senior Technical Writer

Before you begin,

- Sign up for a trial account of [BrowserStack Automate](#).
- Refer to the [Google style guide](#) for any style or formatting guidelines
- Install Node JS

Test1

Your organization has decided to start using BrowserStack. You have been chosen as a trusted employee who tests a basic scenario and explains this to the team. You have to increase adoption so use convincing language and anecdotes wherever possible to encourage the use of BrowserStack.

Note: Feel free to use any resources on the internet to complete this assignment.

1. Create a script to automate the Amazon Sign-in page using Selenium.
2. [Integrate](#) this script you created with BrowserStack. Your test must run on BrowserStack at this stage.
3. Now, use [Github](#) content to run tests on BrowserStack as part of CI/CD. Make some edits to a readme file and your tests should run on BrowserStack when you commit these changes.
4. Create a document that entails your journey from Step1 to Step 3 for your team who wants to start using BrowserStack.
5. Add concepts wherever necessary.
6. Use the style guide to ensure grammatical and structural correctness.

Test 2

Note: Don't spend more than 30 mins on this test.

Tell us 5 things about our documentation site www.browserstack.com/docs that you disliked.
